SUMMARY

Information Technology graduate (2026) with hands-on experience in C#, .NET Core, REST APIs, backend development, and database-driven applications. Experienced in API integration, debugging, testing, and Agile software development. Built an AI-powered resume analysis and career recommendation platform using Google Gemini API for structured data extraction, skill-gap analysis, and personalized interview preparation. Strong foundation in object-oriented programming, DBMS, and SDLC.

TECHNICAL SKILLS

Programming Languages: Python, Java SQL
Backend & APIs: Node.js, RESTful APIs, JWT Authentication and Authorization
Frontend: React.js, HTML, CSS
Databases: MongoDB, MySQL
AI & LLMs: Generative AI, Large Language Models (LLMs), Google Gemini API
Tools & Practices: Git, GitHub, Postman, Unit Testing, Integration Testing, Debugging,

EDUCATION

Bachelor of Technology, Information Technology 2026
Banasthali Vidyapith — CGPA: 7.61

EXPERIENCE

Software Engineer Intern *July 2026 – Present*
Zen Technologies Ltd.

- Develop and maintain C# and .NET Core modules for a defense-simulation platform, implementing feature updates based on technical specifications.
- Implement simulator features aligned with design and QA requirements in collaboration with senior engineers and cross-functional stakeholders.
- Diagnose and resolve software defects through systematic debugging and testing to support module stability and reliability.
- Clarify requirements, troubleshoot software issues, and contribute to sprint commitments in an Agile environment.

Project Intern *Jan 2026 – June 2026*
Centre for Development of Advanced Computing (C-DAC), Delhi

- Built and integrated backend REST API endpoints for a MERN-stack food delivery application, covering authentication, cart management, order placement, and payment workflows.
- Refined MongoDB queries and schema design to support data retrieval across authentication, cart, and order workflows.
- Implemented JWT-based authentication and integrated payment workflows to support secure checkout.
- Contributed to coding, testing, debugging, and deployment support throughout the software development lifecycle.

KEY PROJECTS

AI Resume Analyzer & Career Recommendation Platform

- Developed a full-stack application using React.js, Node.js, Python, and Google Gemini API to analyze resumes and generate personalized career recommendations.
- Built a Python-based PDF processing pipeline to extract resume content and structure skills, experience, and education data for AI processing.
- Integrated Google Gemini API for skill-gap analysis, job-role classification, and personalized interview-question generation.
- Connected frontend, backend, and AI services in an end-to-end workflow from resume upload to recommendation output.
- Implemented skill matching to identify relevant job opportunities based on extracted candidate skills.

CERTIFICATIONS

- Meta Back-End Developer Professional Certificate — Meta
